

Acknowledgments

Acknowledge all of those who made this possible.

A small note. Some thesis have placed the abstract first. Order these sections as you please, but check if there is a new requirement for a specific order.

July, 2050

Don't forget GPT is pretty useful for syntax

- Some guy (some add quotes here. Could also be a funky image related to the thesis.)

Abstract

Summarize the area of interest and how you have contributed to it

Abstract

Sammanfattning

Summarize the area of interest and how you have contributed to it, but in swedish

Sammanfattning

Thesis

This thesis provides an overview and summary of the following papers:

Paper I: *Great Paper Title* by A. Authorson, C. Coauthorson.

Presented at a very nice conference on some date in some location.

Author contributions: Did some stuff, presented the paper at the conference.

Add your papers here.

Chapter 1

Introduction

L^AT_EX (pronounced "LAY-tek" or "LAH-tek") is a tool for typesetting professional-looking documents. However, LaTeX's mode of operation is quite different to many other document-production applications you may have used, such as Microsoft Word or LibreOffice Writer.

1.1 Why learn L^AT_EX

Various arguments can be proposed for, or against, learning to use LaTeX instead of other document-authoring applications; but, ultimately, it is a personal choice based on preferences, affinities, and documentation requirements.

Arguments include:

1. Support for typesetting extremely complex mathematics, tables and technical content for the physical sciences;
2. Facilities for footnotes, cross-referencing and management of bibliographies;
3. Ease of producing complicated, or tedious, document elements such as indexes, glossaries, table of contents, lists of figures;
4. Being highly customizable for bespoke document production due to its intrinsic programmability and extensibility through thousands of free add-ons.

For more, check:

Overleaf Tutorial

1.2 Another Part of the Introduction

L^AT_EX (pronounced "LAY-tek" or "LAH-tek") is a tool for typesetting professional-looking documents. However, LaTeX's mode of operation is quite different to many other document-production applications you may have used, such as Microsoft Word or LibreOffice Writer.

L^AT_EX (pronounced "LAY-tek" or "LAH-tek") is a tool for typesetting professional-looking documents. However, LaTeX's mode of operation is quite different to many other document-production applications you may have used, such as Microsoft Word or LibreOffice Writer.

1.3 Problem Formulation

It's probably a good time to start focusing in on the issue.

1.4 Knowledge Gaps

What do we *not* know:

- This issue with regards to:
 - Particle physics
 - Dark matter
- With emphasis on methods for determining the exact velocity of a water drop.

Chapter 2

Research Methodology

A short summary of the chapter.

2.1 Purpose and Aim

Some introductory text 2.1.

Figure 2.1: Image generated by Sora [1].

More introductory text.
As an example, see Fig. 2.2b.

(a) Dogs.

(b) Same Dogs.

Figure 2.2: Image generated by Sora [1].

2.2 Research Design

Outline your research design here.

2.3 Materials and Methods

Outline your Materials and Methods here. Don't forget to be very thorough, and, above all, clear about the limitations of your setup and methods.

2.3.1 Of course you can also do subsections

And sub sub.

Chapter 3

Summary of Results and Discussion

Show the main outcomes of your research in this chapter!

A way of doing equations: (3.1), refer to them using these commands (3.2), or (3.3) and perhaps (3.4)

$$\alpha = 1 \tag{3.1}$$

$$\omega = 0 \tag{3.2}$$

$$\gamma = 0 \tag{3.3}$$

$$\theta = 1. \tag{3.4}$$

$$\tag{3.5}$$

These should look nice.

3.1 Another section

A single equation can be done as follows (3.6)

$$\rho = \frac{4}{6} \tag{3.6}$$

Chapter 4

Conclusions

Summarize your conclusions. You may add sections if needed, but its best to keep it short.

Chapter 5

Future Work

What could be done to improve or continue this work in the future?

Chapter 6

Appended Papers

In this chapter, the appended papers are listed.

Paper III: *A great paper title* by A. Authorsson, C. Coauthorson and C. Coauthorson.

Published in Nature, June 2050.

Author contributions:

Bibliography

- [1] A. Einstein, B. Podolsky, and N. Rosen, “Can quantum-mechanical description of physical reality be considered complete?,” *Physical review*, vol. 47, no. 10, p. 777, 1935.

Paper I

Title of the Paper

A. Authorsson, C. CoAuthorsson

Presented at a very fancy conference on some date in some location.
